

The Intunet Development Process

Key Considerations

Intunet have developed a successful working process that is designed to achieve the following key outcomes:

We will meet you to understand fully your Client's business objectives and to suggest how best to apply latest technology and design resources to fulfil these objectives.

To define in writing and to cost all proposed solutions and options.

To implement agreed proposals according to an open and measurable performance programme.

To fully test all components of a project at both prototype and live stages.

To establish and maintain a process of continuous Client consultation, communication and feedback from day one to final sign-off.

The Process in summary

- Initial Meeting
- Proposal
 - Feedback & Communication
- Agreement & Contract
- Visuals (where applicable)
 - Feedback & Communication
- Visuals Sign-Off (where applicable)
- Project Development & Milestone Releases
 - Feedback & Communication
- Internal Testing
- Live Testing
 - Feedback & Communication
- Project Acceptance & Sign-Off
- Project goes live

Client benefits of the Intunet development process

- No "grey areas" - of work content, budgets or timetable.
- Full Client involvement and interaction throughout.
- Measurable performance.
- Intunet are always looking for ways to improve their clients project following release to live.
